

PROMISE KOLADE

Software Engineering Student · Systems & Backend-Focused Developer

Abuja, Nigeria • 09024840717 • 04ukiyo14@gmail.com • github.com/Peekay08 • <https://www.linkedin.com/in/promise-kolade-2783532b2> • <https://peekay08.github.io/Portfolio/>

PROFESSIONAL SUMMARY

Software Engineering student with hands-on experience building full-stack applications, desktop software, and backend systems. Strong foundation in C++, Java, SQL, and modern frontend development, with a particular interest in systems programming, backend engineering, compilers, and performance-focused software. Passionate about solving complex engineering problems and continuously exploring low-level technologies.

TECHNICAL SKILLS

Languages: C++, Java, JavaScript, Python, SQL, HTML5, CSS3

Frontend: React, Vite, HTML, CSS, JavaScript, Responsive Design, DOM Manipulation, REST API Integration

Backend: C++, Java Servlets, REST APIs, HTTP, JSON, Authentication, CRUD Operations

Databases: PostgreSQL, Microsoft SQL Server, SSMS, SQL (joins, constraints, normalization, indexing)

Desktop Development: Qt, CMake

Libraries: libpq, OpenCV, Boost, libcurl

Tools: Git, GitHub, Apache NetBeans, Apache Tomcat, Postman, Visual Studio, VS Code, PgAdmin

Core Concepts: OOP, Data Structures & Algorithms, REST APIs, Database Design, MVC, Client-Server Architecture, Memory Management, Software Testing, Version Control

PROJECTS

Campus Intelligence Platform (Digital Twin) | *React · C++ · PostgreSQL · REST API*

- Built an interactive digital-twin dashboard with a live campus map, real-time building/room occupancy visualization, and timetable management.
- Engineered a C++ REST backend (libpq + PostgreSQL) with authentication and full CRUD endpoints for buildings, rooms, and users.
- Derived room occupancy status dynamically from timetable queries and used it to drive live map styling and analytics.
- Delivered a responsive UI with historical occupancy tracking and an analytics dashboard.

NEXUS Compiler | *C++ · CMake · LLVM (planned) · Qt (planned)*

- Designed and implemented a compiler pipeline from scratch: lexer, parser, and AST generation.
- Supported variable declarations, arithmetic expressions, if/else branching, while loops, functions, and std::cout output.
- Built structured error reporting across the pipeline; architected as a long-term, ongoing exploration of unified execution and compilation systems.

Java Servlet Applications | *Java · Apache Tomcat · JDBC*

- Built server-side applications using Java Servlets deployed on Apache Tomcat, handling HTTP requests/responses and form processing.
- Implemented database connectivity and structured exception handling for reliable request/response cycles.

EXPERIENCE

Software Engineering Intern

Truemind Innovations Limited

- Worked across SQL Server, Java Servlets, and Apache Tomcat, strengthening backend development and MVC fundamentals.
- Gained practical experience in database connectivity, exception handling, and API testing with Postman and NetBeans.

EDUCATION

B.Sc. Software Engineering

Expected 2028

Nile University of Nigeria

Advanced Diploma in Software Engineering

Aptech Computer Education

In Progress — Semester 3 of 4

Relevant Coursework: Software Engineering, Systems Analysis & Design, Computer Architecture, Mathematical Methods, Database Systems, Object-Oriented Programming, Data Structures, Algorithms

OTHER SKILLS

Git & GitHub, Agile Development, Debugging, Technical Documentation, Problem Solving, Team Collaboration
